

## Speech Sound Development Chart

A child's speech may be delayed if he/she has not developed the listed sounds by the given ages.

**It is important to note the following:**

- Children can develop these sounds before the given ages
- Many sounds have a time range of normal acquisition
- The /r/ sound is later developing and may take up until age 9 to fully master

If you have any questions about your child's speech sound development, contact a Speech-Language Pathologist.
